

CONFIDENCE IN FIRE SAFETY

Bringing together all aspects of fire safety for
the future built environment

"Fire protection is one of the most important investments and critical considerations that can be made on a construction project"

International Fire Consultants

A holistic approach to fire safety

Recognised internationally as the go-to professionals in all aspects of fire safety, we are very proud of our growing reputation as one of the world's leading fire engineering and fire safety solution providers.

International Fire Consultants has brought together some of the most experienced professionals in the industry today, many of whom are recognised as leaders in their respective fields, to provide the most comprehensive consultancy of its type.

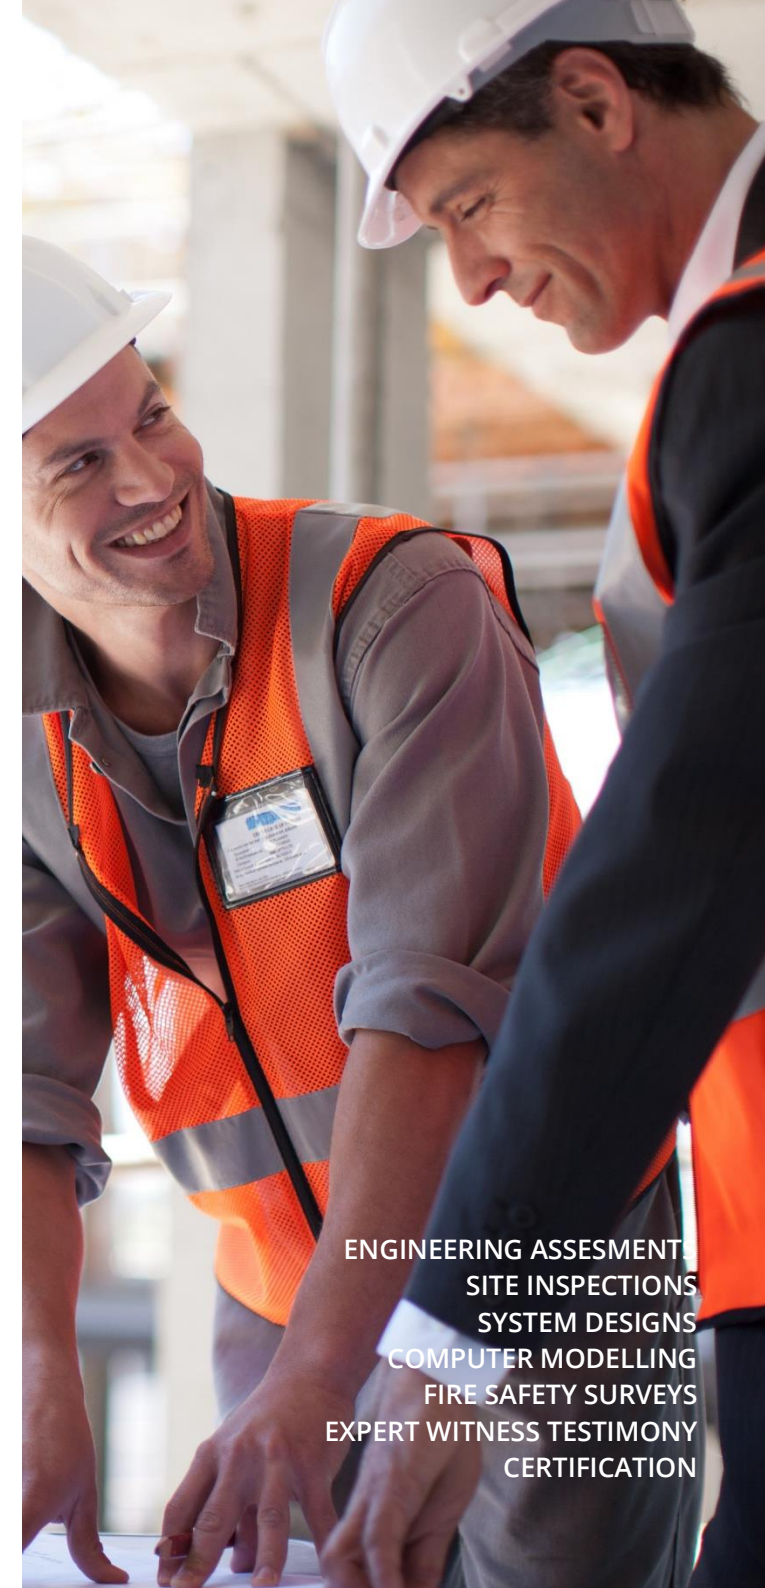

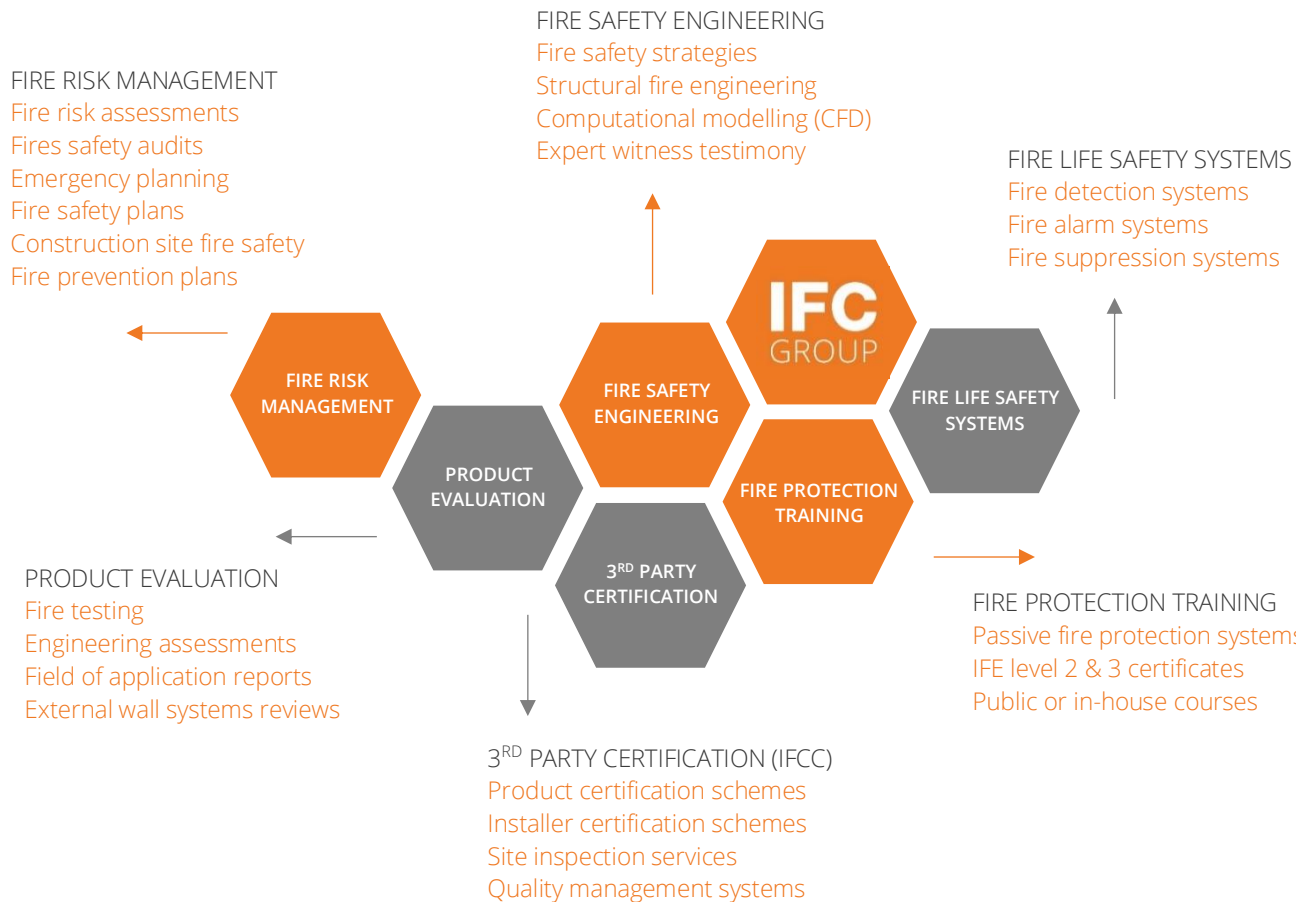

HOW WE CAN HELP

International Fire Consultants are uniquely positioned to provide a holistic fire engineering service for any construction project, regardless of size and complexity. We specialise in Fire Engineering, Fire Risk Management, Product Evaluation, Fire Life Safety Systems, Training and Certification; allowing us to provide comprehensive assurances to support design, specification, installation and validation of fire safety factors during your project.

For those who are looking for guidance in order to understand, identify and solve issues surrounding fire safety, designing new developments or redeveloping existing buildings for future generations, we can offer a complete end-to-end service. For others with specific requirements, our specialist expertise can help in many areas such as overcoming planning issues, achieving fire safe buildings, managing costs and achieving the best values.

Our unrivalled combination of fire safety experience and knowledge, coupled with our wide-range of services, means we can confidently provide the very best guidance and advice from initial concept designs, through-out the construction phase to well beyond final handover.
